

**EMPLOYMENT**

**BY**

**G.SRIKANTH**

# **INTRODUCTION**

## ***1.1 Overview***

The project is generally based on the estimated number of persons in india as per NSS 61th round and 66th round in the year (2004-05) and (2009-10). It gives details for rural and urban areas by status

of persons of labour force, work force and unemployed.

## *1.2 Purpose*

This project is mainly created for the people to know about the employment statistics of both urban and rural people. The rate of people getting employed in the year 2004-05 and 2009-10

under the guidance of NSS can be achieved.

## LITERATURE SURVEY

### *2.1 EXISTING PROBLEM*

*Here the major problem that one can notice is the*

*unemployment in both urban and rural areas. According to the statistics people without jobs is more compared to the people with jobs which leads to the employment issue.*

## ***2.2 Proposed solution***

*The accurate solution for this*

*problem to be solved is development which brings employment to the people and recruit them to reduce the issue. As we can read from the data that the unemployment issue is reduced comparatively from 2005 to 2010.*

## **THEORITICAL**

## **ANALYSIS**

The data depicts that the Labour force and the Work force is balancing equally with high potential in 61th round and 66th round NSS analysics. More likely the people are getting habituated for employment and getting jobs. But compared to the 61th round of NSS program the people from urban are getting more employment in

66th round of NSS program.

The rural community has gained a maximum employment in 2004-05 compared to urban community. The statistics have proved that millions of people are getting employment than unemployed people.

**RESULT**

The final result that we can conclude from the data is the employment is more in 2009-10 for labour force and work force people in urban areas.

## APPLICATIONS

-Maharashtra and some parts of Madhya Pradesh people living in urban areas are getting more

employment than rural people.

-The kerala city where there is the highest literacy rate is still down in employment and getting jobs according to statistics.

-Rural people in hyderabad have the highest employment rate compared to urban people.

## CONCLUSION

From the entire summarizing the data we come to a conclusion that work force and the labour force has a high standard in the 2009-2010 NSS program.

## FUTURE SCOPE

In the coming years

employment is the main thing which one must concentrate on. As the new developments and inovations take place, there is no suffer for employment due to huge job circle in the world.
